

Project Title	Deep Learning for Comment Toxicity Detection with Streamlit
Skills take away From This Project	Deep Learning, Model Development and Training, Model Evaluation and Optimization, Streamlit Web App Development, Model Deployment, NLP
Domain	Online Community Management and Content Moderation

Problem Statement:

Online communities and social media platforms have become integral parts of modern communication, facilitating interactions and discussions on various topics. However, the prevalence of toxic comments, which include harassment, hate speech, and offensive language, poses significant challenges to maintaining healthy and constructive online discourse. To address this issue, there is a pressing need for automated systems capable of detecting and flagging toxic comments in real-time.

The objective of this project is to develop a deep learning-based comment toxicity model using Python. This model will analyze text input from online comments and predict the likelihood of each comment being toxic. By

accurately identifying toxic comments, the model will assist platform moderators and administrators in taking appropriate actions to mitigate the negative impact of toxic behavior, such as filtering, warning users, or initiating further review processes.

Business Use Cases:

- 1. Social Media Platforms:** Social media platforms can utilize the developed comment toxicity model to automatically detect and filter out toxic comments in real-time.
- 2. Online Forums and Communities:** Forums and community websites can integrate the toxicity detection model to moderate user-generated content efficiently.
- 3. Content Moderation Services:** Companies offering content moderation services for online platforms can leverage the developed model to enhance their moderation capabilities.
- 4. Brand Safety and Reputation Management:** Brands and advertisers can use the toxicity detection model to ensure that their advertisements and sponsored content appear in safe and appropriate online environments.
- 5. E-learning Platforms and Educational Websites:** E-learning platforms and educational websites can employ the toxicity detection model to create safer online learning environments for students and educators.
- 6. News Websites and Media Outlets:** News websites and media outlets can utilize the toxicity detection model to moderate user comments on articles and posts.

Approach:

1. Data Exploration and Preparation:

- Load and explore the dataset.
- Perform text preprocessing (cleaning, tokenization, stopword removal, vectorization).

2. Model Development:

- Train a deep learning model for toxicity detection.
- Experiment with architectures like LSTMs, RNNs, or transformer-based models (BERT).
- Store the trained model for deployment.

3. Streamlit Application Development:

- Build an interactive UI using **Streamlit** to allow users to enter comments and receive toxicity predictions in real-time.
- Display data insights, model performance metrics, and sample test cases in the Streamlit dashboard.
- Provide options to **upload a CSV file** for bulk predictions.

Results:

A real-time interactive toxicity detection web application that enhances online content moderation

Technical Tags:

Python, Deep Learning, Neural Networks, NLP, Model Training, Model Evaluation, Streamlit, Model Deployment

Data Set : [DataSet](#)

Project Deliverables:

1. **Streamlit Application:** An interactive web app where users can input text and get toxicity predictions.
2. **Deployment Guide:** Instructions on how to set up and deploy the Streamlit application.
3. **Source Code:** Complete Streamlit-based Python code for model inference and visualization.

Timeline:

The project timeline spans one week, encompassing tasks such as data preprocessing, model development and training, deployment, documentation, testing, evaluation, and finalization.

Project Evaluation metrics:

- You are supposed to write a code in a modular fashion (**in functional blocks**)
- Maintainable: It can be maintained, even as your codebase grows.
- Portable: It works the same in every environment (operating system)
- You have to maintain your code on **GitHub**.(Mandatory)
- You have to keep your **GitHub** repo public so that anyone can check your code.(Mandatory)
- Proper readme file you have to maintain for any project development(Mandatory)

- You should include basic workflow and execution of the entire project in the readme file on **GitHub**
- Follow the coding standards:
<https://www.python.org/dev/peps/pep-0008/>
- You need to Create a Demo video of your working model and post in **LinkedIn**(Mandatory)

PROJECT DOUBT CLARIFICATION SESSION (PROJECT AND CLASS DOUBTS)

About Session: The Project Doubt Clarification Session is a helpful resource for resolving questions and concerns about projects and class topics. It provides support in understanding project requirements, addressing code issues, and clarifying class concepts. The session aims to enhance comprehension and provide guidance to overcome challenges effectively.

Note: Book the slot at least before 12:00 Pm on the same day

Timing: Monday-Saturday (3:30PM to 4:30PM)

Session Link:

https://docs.google.com/document/d/1J7z_Y2whgCtFDXixysXBNXqCuhXAYD9vkiNQ-7Q7XKs/edit?usp=sharing

LIVE EVALUATION SESSION (CAPSTONE AND FINAL PROJECT)

About Session: The Live Evaluation Session for Capstone and Final Projects allows participants to showcase their projects and receive real-time feedback for improvement. It assesses project quality and provides an opportunity for discussion and evaluation.

Timing:

Monday-Saturday (11:30AM to 1:00PM)

Monday-Saturday (05:30PM to 07:00PM)

Booking link : <https://forms.gle/1m2Gsro41fLtZurRA>
